NOTE:	<p>1. All depths are in meters and below chart datum (i.e. 0.0 mtrs height of tide)</p> <p>2. Maximum acceptable draft at CD for a berth is basis the Lowest Astronomical Tide which is 0.0 mtrs.</p> <p>3. Higher berthing draft may be accepted basis the low water expected during the vessel stay at the berth. For Example: If the Maximum acceptable draft for a given berth at CD is given as 13 metres and the height of lowest low water expected during the vessel's stay is 0.5 metres, then maximum acceptable draft for that berth will be 13.5 metres.</p> <p>4. A Minimum under keel clearance of "10% of the ship's draft" will be maintained during channel passage. A minimum UKC of 0.3 to 0.5 mtrs will be maintained at all time when the vessel is alongside the berth.</p> <p>5. Minimum depth in approach channel and manoeuvring basin for the month is as follows. a) MICT approach channel - 14.1 mtrs. b) South basin (AICTPL & ACMPTL) approach channel - 15.2 mtrs c) West basin approach channel -14.8 mtrs.</p> <p>6. Drafts at which vessel can sail anytime (AMCT/MICT/SB/WB) Lowest Low water in June 19 : 0.65 mtrs. AMCT and MICT : Vessels with draft < = 13.4 M can sail anytime. South Basin (AICTPL & ACMPTL) : vessels with draft < = 14.4 M can sail anytime. West Basin : vessels with draft < = 14.0 M can sail anytime (Sub to Tidal Window) Above drafts are basis 10% UKC in the channel.</p> <p>7. (a) Max acceptable LOA / Beam / Draft for IOCL SPM is 348 / 65 / 25 Mtrs (b) Max acceptable LOA / Beam / Draft for HMEL SPM is 345 / 60 / 23 Mtrs (c) Night berthing is restricted at both IOCL and HMEL SPM</p> <p>8 Weather Parameters for berth (a) Cease berthing activity when sustained wind speed more than 30 kts. (b) Cease cargo transfer operation when sustained wind speed more than 35 kts. (c) Unberth ship if sustained when wind speed more than 40 kts.</p> <p>9. Water Density - Water Density varies from 1.020 to 1.023 during SW Monsoon period. Remaining part of the year it ranges between 1.024 to 1.025</p>
